***Continued Examination Under 37 CFR 1.114***

13. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submissions filed on October 28, 2008 and December 16, 2008 have been entered.

***Allowable Subject Matter***

14. Claims 1 and 3 – 9 are allowed. The following is an examiner's statement of reasons for allowance: the closest prior art references made of record, fail to teach or suggest, either alone or in combination, an arrangement for the production of a three-dimensional product, as claimed in newly-amended claim 1, which now requires that the *powder dispenser is a continuous unit having a dispensing end and a powder refill end, where the dispensing end is disposed inside said casing and the powder refill end is disposed outside said casing such that a powder refill opening on the refill end is exposed to an ambient atmosphere outside said casing and such that the powder dispenser is thereby directly accessible from outside the casing for refill of powder material during a production process without affecting pressure conditions inside the casing*. The closest prior art reference(s) of Feygin, et al. and Forderhase, et al. previously

Art Unit: 1791

cited, *fails to teach that the powder dispenser has a powder refill end disposed outside said casing such that a powder refill opening on the refill end is exposed to an ambient atmosphere outside said casing wherein pressure conditions inside the casing are not affected.* The reference of Feygin, et al. teach a recycling element which transports excess powder from the build bed via a conduit to a cyclone separator that sits above the powder dispenser; however, fails to teach that the refill end is exposed to an ambient atmosphere wherein pressure conditions inside the casing are not affected. In the apparatus of Forderhase, et al., the powder dispenser refill end *is similarly not exposed to an ambient atmosphere and is also not disposed outside the casing.* The powder dispensers of Forderhase, et al. are contained within the apparatus and are removed from the apparatus interior via rails on which the dispensers slide (figures 4 and 5). The dispensers can then be covered and stored.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
